DETAILED ACTION

Applicant's amendment filed on 11/1/2004 has been received and entered into record and considered.

The following information provided in the amendment affects the instant application:

1. Claims 3, 5-7, 12-14, 16, 18-20 are cancelled.
2. Claims 21-27 are added to the instant application.
3. Currently, claims 1-2, 4, 8-11, 15, 17, 21-27 are under examination.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 9-11, 15, 24-27 rejected under 35 U.S.C. 102(a) as being anticipated by Hellman et al. (WO 99/09058).

Hellman et al. teach an immunoassay to measure gamma-carboxylated osteocalcin in a body fluid sample from patients. The immunoassay kit includes capturing reagents, such as recombinant monoclonal antibody or recombinant antibody fragment for gamma-carboxylated osteocalcin, and EDTA for eliminating bivalent ions, e.g. Ca⁺⁺ (See page 2, line 12-25; Table 2; Table 3-5). The antibody can recognize epitopes occurring in the region of amino acids 17-24 of the gamma-carboxylated osteocalcin molecule (See Abstract, claim 5). The kit is for use of investigating bone disorders, fragility, fracture or osteoporosis (See Abstract).

Art Unit: 1641

With respect to claim 10, Hellman et al. teach various monoclonal antibodies in two-sites immunoassay to determine the intact osteocalcin (OC) and the total OC (See Table 2).

With respect to claim 11 and 24, Hellman et al. teach an antibody having the specific epitopes, e.g. 17-24, to determine the gamma-carboxylated osteocalcin (See claim 5).

With respect to claim 15, 25-27, the antibody taught by Hellman is made by recombination technique (See Method and Materials).

Response to Applicant's Arguments

3. The "Scope of Enablement" rejection under 35 USC §112, first paragraph set forth in the previous Office Action is withdrawn.

4. Applicant's arguments with respect to claims 9-20 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

5. Claims 1-2, 4, 8 are allowed.

6. The following is an examiner's statement of reasons for allowance: no prior art teaches or fairly suggests using gamma-carboxylated osteocalcin (COC) or the ratio of total or intact osteocalcin (TOC or IOC) to COC, i.e. COC/IOC or COC/TOC, as an assessment of bone fracture, fragility or osteoporosis.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1641

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
